Shadelight
AGENCY

Southern African AI Data Partnerships

Regional context. Project-specific qualification.

Shadelight Agency is a Zimbabwe-based agency developing Southern African AI-data sourcing and delivery partnerships.

PROPOSED SERVICE AREAS

Services are under development. Delivery depends on verified personnel and resources, project feasibility and agreed terms.

Data sourcing & licensing. Explore regional sources, with provenance, licensing authority and permitted use verified before any supply proposal.

Collection, annotation & validation. Assess tasks against instructions, contributor requirements, output formats and acceptance criteria.

LLM evaluation & human feedback. Explore response relevance, instruction-following and preference review using your rubric; suitable evaluators must be identified and qualified.

Language & speech-data support. Discuss linguistic review, transcription verification and speech projects, assessed against language variant, audio conditions and review requirements.

GEOGRAPHIC & LINGUISTIC FOCUS

Initial focus: **Zimbabwean English, Shona and Zimbabwean Ndebele.** Personnel and project suitability must be verified. Other Southern African languages and locations can be explored as resources are established.

PROPOSED PATH TO A POTENTIAL PILOT

Review your brief. Verify feasibility and rights where relevant. Agree scope, acceptance criteria, data handling and commercial terms. Where appropriate, discuss a limited paid pilot before a larger engagement.

SHARE A NON-CONFIDENTIAL BRIEF

Include your company, task, language or locale, indicative volume, expected output and timeline. Please do not send confidential datasets or personal data with the initial enquiry.
